

Whopper Grower Fish Pond Fertilizer 10 – 52 – 4 Water Soluble

General Information

Whopper Grower is formulated from the highest quality materials. All are highly water soluble. Therefore, Whopper Grower does not sink to the bottom and become tied up in mud bottoms. Whopper Grower provides nutrients that stimulate the growth of plankton, the basis of the food chain in ponds. Water insects and organisms feed on the plankton. Small fish feed on the insects and small organisms; large fish prey on the small fish. Your pond's entire food chain will be increased. Using Whopper Grower can increase your fish production two to three times. Infertile ponds seldom produce more than 100 lbs of fish per acre.

Directions for General Application

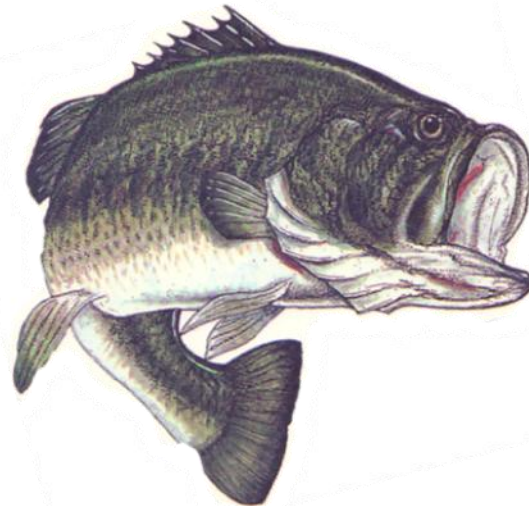

Apply at a rate of 4 lbs per surface acre of water. Begin the first application when the water temperature reaches 60° Fahrenheit. The second application should be done two weeks later. Then apply once every three weeks for nine weeks. Applications may be made monthly thereafter until the water temperature cools back down to below 60° Fahrenheit.

Warning

Using a Secchi Disk, measure light penetration. Once reading is 18 to 24 inches, stop fertilization.

Seller warrants this product conforms to its chemical description and is reasonably fit for the purpose stated on the label when used in accordance with directions under normal condition used; but neither this warranty or any other warranty merchantability of fitness of a particular product expressed or implied, extends to the use of this product contrary to the label instructions or under abnormal conditions, or under conditions not reasonably foreseeable to the seller, and buyer assumes the risk of any such use.

WHOPPER GROWER FISH POND FERTILIZER 10 - 52 - 4 **100% Water Soluble**

Manufactured for

Suttle Fish Farm
